

G T G T G T A A T T

The image displays a sequence of nucleotide bases: G, T, G, T, G, T, A, A, T, T. Each base is represented by a large, bold, colored letter. Below each letter is a smaller, semi-transparent version of its complementary base, forming a double-stranded structure. The colors used are yellow for G, red for T, green for A, and blue for C. The sequence is arranged in a slightly staggered, overlapping manner, with the top row of letters being larger and more prominent than the bottom row.
